Weekly Newsletter 2026-W10

Experiential learning ideas for all age groups

★ Introduction

In today's classrooms, learning is most powerful when students experience concepts rather than just memorize them. Experiential learning encourages students to actively participate, explore ideas, and connect lessons with real-life situations.

By incorporating hands-on activities, discussions, and practical experiences, teachers can make learning more engaging, meaningful, and memorable for students of all age groups. This newsletter shares simple experiential learning ideas that teachers can easily implement in their classrooms.

What is Experiential Learning?

Experiential learning is a learning-by-doing approach where students gain knowledge through activities, reflection, and real-world experiences.

- ✓ Students actively participate
- ✓ Learning becomes practical and meaningful
- ✓ Encourages creativity and critical thinking

The best learning happens when students explore, experiment, and experience.

✦ Experiential Learning Ideas -

For Senior Students

1. Real-Life Problem Solving

Give students real-world problems to analyze.

Examples:

- Study local environmental issues
- Survey community problems
- Suggest solutions and present findings

2. Group Collaboration

Students work in teams to complete tasks.

Benefits:

- Improves teamwork
- Builds communication skills
- Encourages peer learning

3. Student Presentations

Let students explain topics to the class.

Activities:

- Topic presentations
- Research poster displays
- Short teaching sessions by students

Did You Know?

Research shows that students remember up to 75% of what they learn through practical experiences, compared to much lower retention from only listening to lectures.

Tips for Teachers

- Connect activities with real-life situations
- Encourage students to reflect on their experiences
- Allow students to ask questions and explore ideas
- Focus on learning process rather than just results

Inspirational Teachers' Story

DR PRAGYA SINGH

Dr. Pragya Singh, a dedicated government school teacher from Hanoda Middle School in Durg, Chhattisgarh, is known for her remarkable efforts to make mathematics enjoyable for children. She noticed that many students were afraid of math and often stayed away from classes. Determined to change this, she used her own savings to create a unique “Maths Park” within the school premises. In this park, children learn mathematical concepts through games like snake and ladder, chair runs, and other playful activities. Her innovative approach not only filled classrooms with eager learners but also helped children, including those with disabilities, to understand math in a fun and interactive way. This transformation brought a wave of positivity to the school, turning fear into excitement. In recognition of her extraordinary contribution to education, Dr. Pragya Singh was honored with the National Teachers' Award in 2025. Her story is a shining example of how creativity, dedication, and compassion can change the way children learn and inspire communities across India.

Latest Education Update

- Class 10 board exams will now allow two attempts in the same year, and the best score will be counted to help reduce exam pressure on students.
- The question paper pattern is changing, with around 50% competency-based questions and 20% objective-type questions to promote conceptual learning rather than rote memorization.
- Digital evaluation (On-Screen Marking) is being introduced for Class 12 answer sheets, allowing faster and more transparent evaluation of exam papers.
